

## Button Cup Installation Instructions

1. Position cup on pole at desired location and height. Mark where hole for wire protector is needed. Drill a  $\frac{3}{4}$ " diameter or larger hole.
2. Position cup with wire protector in the hole and mark where you want the two mounting holes. Drill and tap these holes for  $\frac{1}{4}$ -20 coarse thread.
3. Place rubber o-ring pieces in the appropriate slots on the back of the cup. These pieces are designed to provide side support and pressure against the cup so the mounting bolts won't loosen. For  $2\frac{1}{2}$ " to 7" diameter poles put the pieces in the two inside slots. For poles larger than 7" diameter put them in the two outside slots.
4. Bolt cup to pole so it is very snug.
